DETAILED ACTION

A certified translation of Japanese Patent Application No. 2004-045102, filed on 09/03/2010 has been entered. Claims 1-29, are pending in this application.

Allowable Subject Matter

1. Claims 1-29, are allowed.

The following is an examiner's statement of reasons for allowance: The prior art to Hagiwara [US 20010019399 A1], teaches use of a timer to control a liquid supply system from the supply piping.

However, with respect to claim 1, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a timer that measures the time that has elapsed since the supply of the liquid by the liquid supply mechanism was started, and a control apparatus that determines, based on a measurement result of the timer, whether a space, which is between the image plane side tip part of the projection optical system and the object and includes at least an optical path of the exposure light, is filled with the liquid, in combination with the other elements required by claim 1.

With respect to claim 6, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a timer that measures the time that has elapsed since the supply of the liquid by the liquid supply mechanism was stopped; and, a control apparatus that determines, based on a measurement result of the timer, whether the liquid has been recovered from the space between the image

plane side tip part of the projection optical system and the object, in combination with the other elements required by claim 6.

With respect to claim 9, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a first measuring instrument that measures the amount of liquid supplied by the liquid supply mechanism; a second measuring instrument that measures the amount of liquid recovered by the liquid recovery mechanism; and a control apparatus that determines, based on the measurement results of the first measuring instrument and the second measuring instrument, whether a space, which is between the image plane side tip part of the projection optical system and an object opposing the tip part and includes at least an optical path of the exposure light, is filled with the liquid, in combination with the other elements required by claim 9.

With respect to claim 13, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a measuring instrument that measures the amount of liquid recovered by the liquid recovery mechanism since the supply of the liquid by the liquid supply mechanism was stopped; and a control apparatus that determines, based on the measurement result of the measuring instrument, whether the liquid has been recovered from the space, in combination with the other elements required by claim 13.

With respect to claim 16, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring the time that has elapsed since the start of the supply; and determining that the space is filled with

the liquid at a point in time when the elapsed time exceeds a prescribed time, in combination with the other elements required by claim 16.

With respect to claim 17, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring an amount of liquid supplied and an amount of liquid recovered per unit of time; and determining that the space is filled with the liquid at least one of the point in time when the difference between the amount supplied and the amount recovered has become less than a prescribed value, or the point in time when a prescribed time has elapsed since the difference between the amount supplied and the amount recovered became less than the prescribed value, in combination with the other elements required by claim 17.

With respect to claim 19, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring the time that has elapsed since the stopping; and determining that the recovery of the liquid that filled the space is complete at the point in time when the elapsed time exceeds a prescribed time, in combination with the other elements required by claim 19.

With respect to claim 20, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring an amount of liquid supplied and an amount of liquid recovered per unit of time; and determining that the recovery of the liquid that fills the space is complete at least one of the point in time when the amount recovered has become less than a prescribed amount, or the point in time when a prescribed time has elapsed since the amount recovered became

less than a prescribed value, in combination with the other elements required by claim 20.

Claims 2-5, 7-8, 10-12, 14-15, 18, 21-29, are allowable by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
